WE ARE EDGE

ADVANCED TECHNOLOGY FOR DEFENCE & BEYOND

We live in an accelerating world. Characterised by uncharted frontiers, the future is empowered by advanced technology that is galvanising a new breed of players. At the edge of these frontiers exist no limits – where boundless opportunities await.

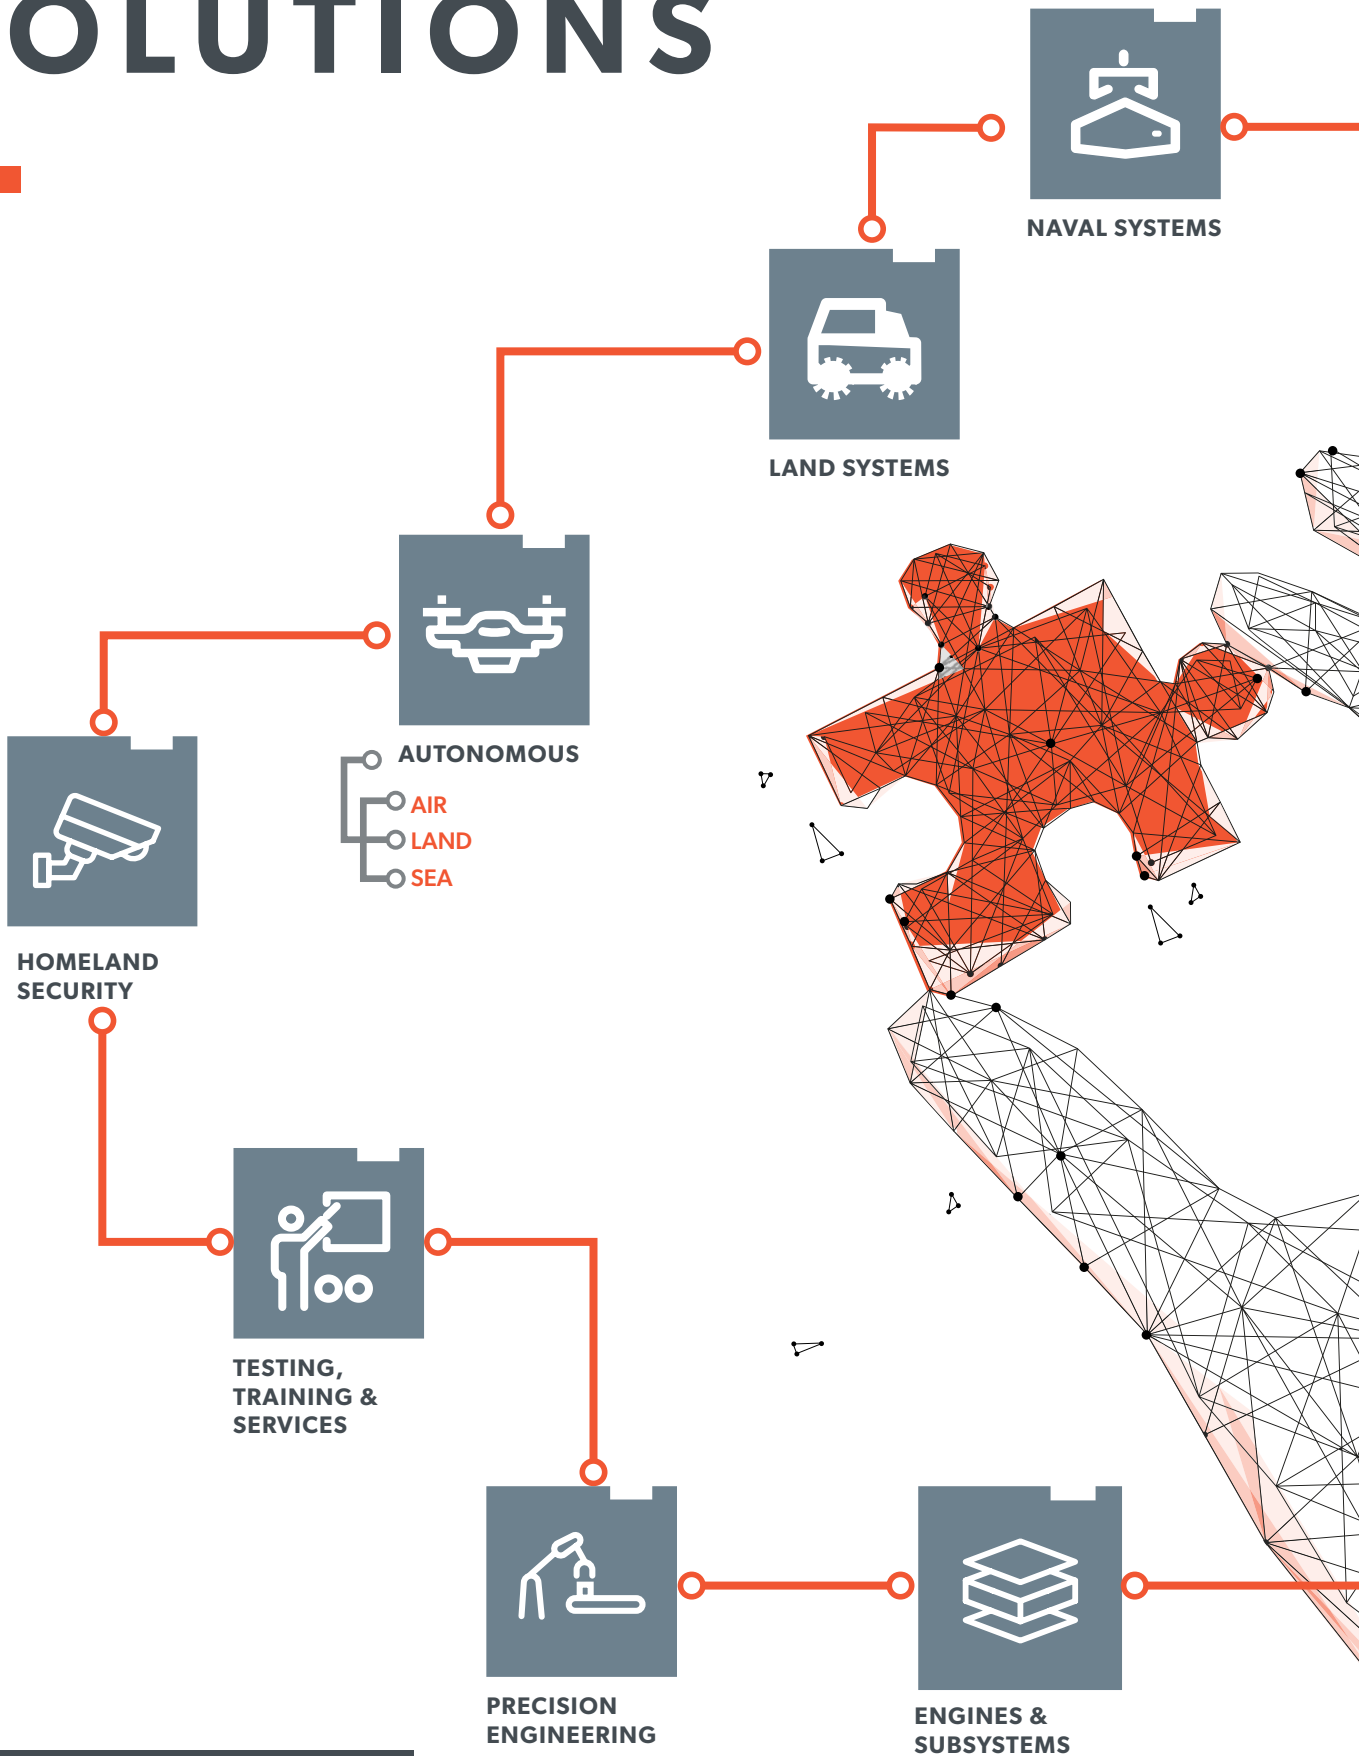

Transforming how we live, and ensuring a more secure future, is what we do. We are EDGE; and our mission is simple: to bring innovative technologies and services to market with greater speed and efficiency.

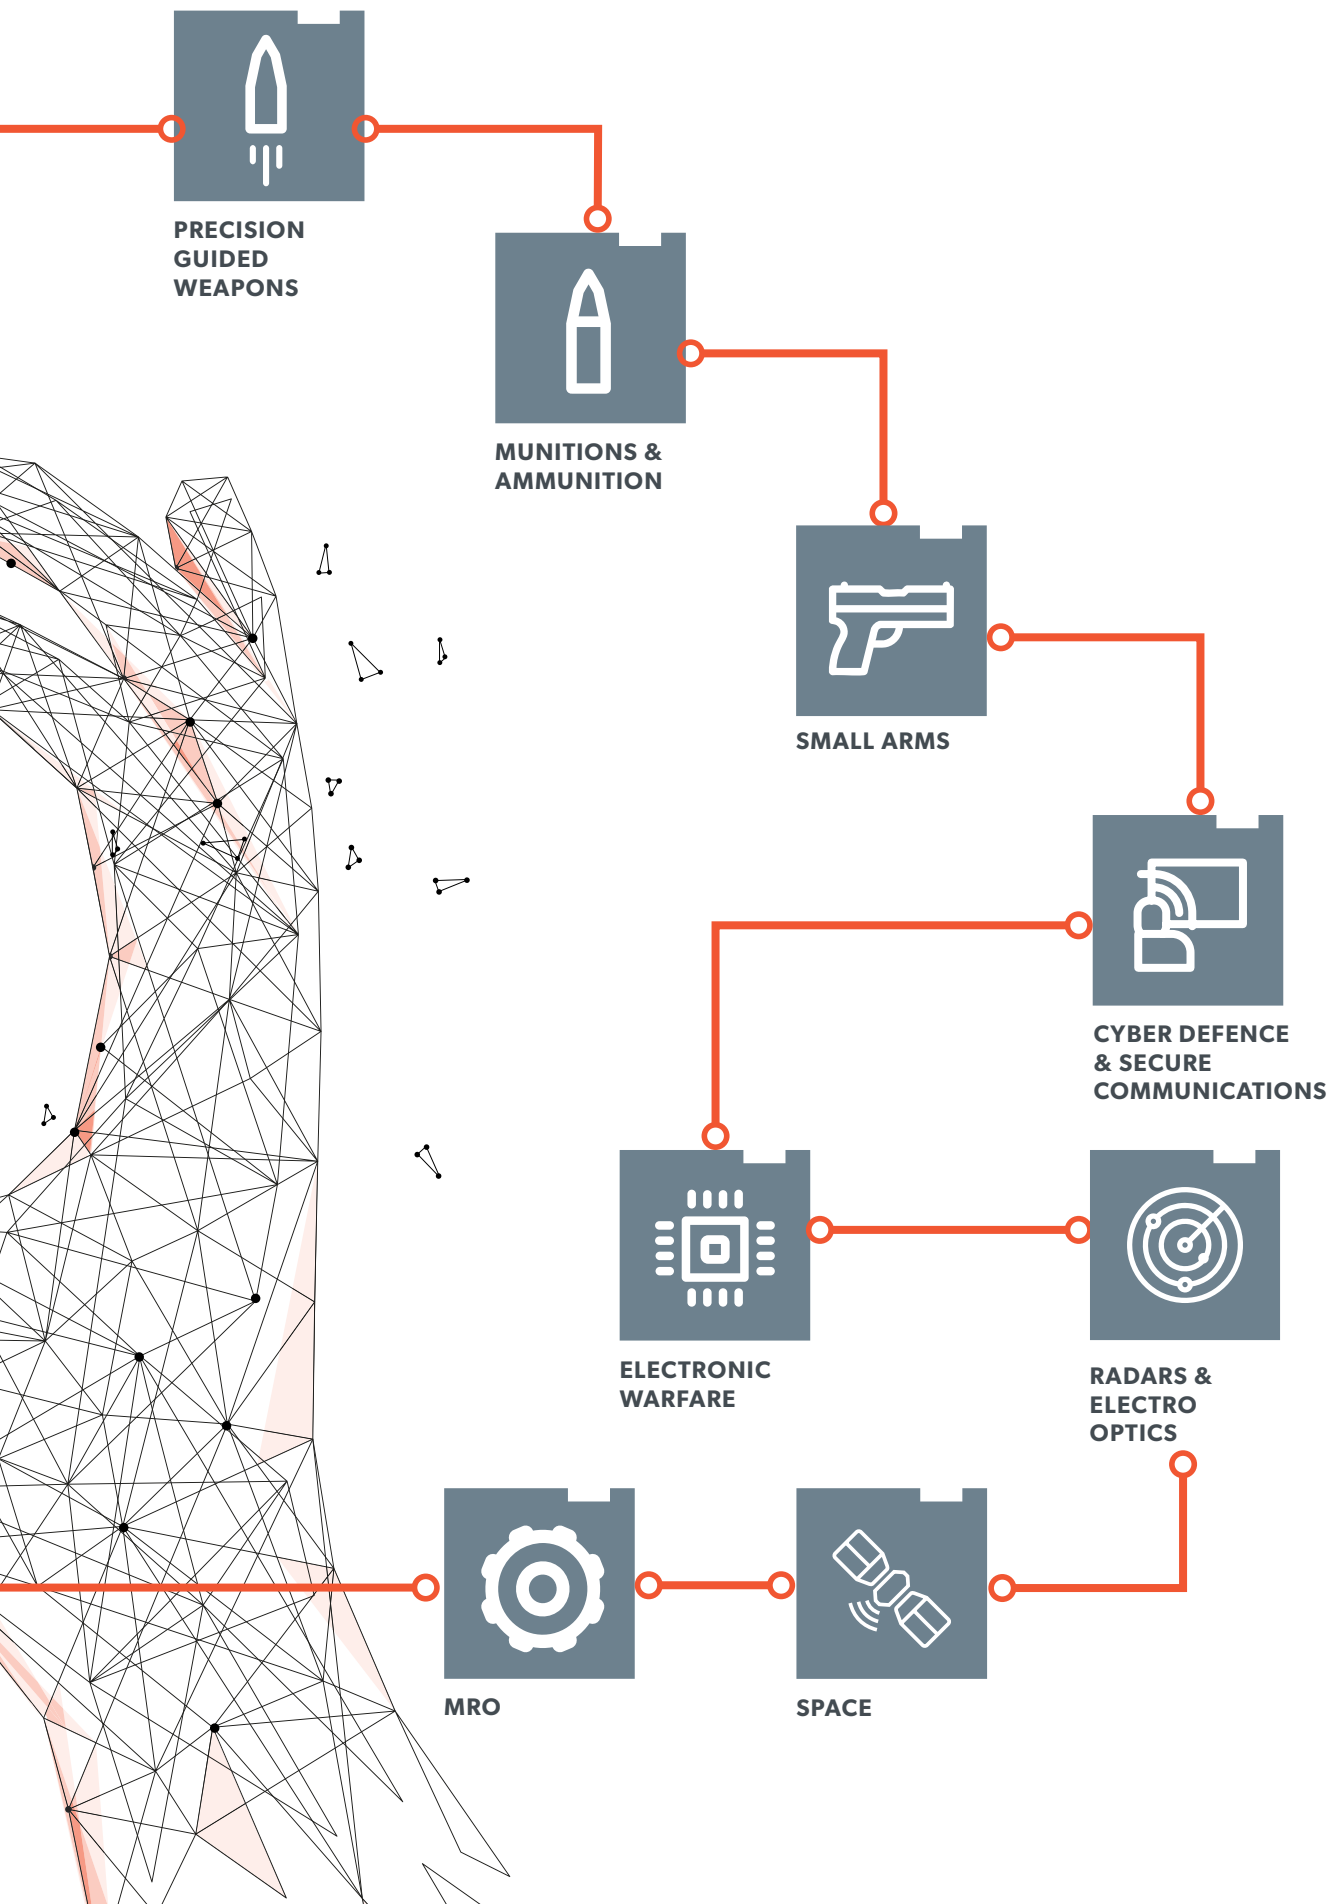

We are driving the development of sovereign capabilities for global export and for the preservation of national security, working with front-line operators, international partners, and adopting advanced technologies.

We are EDGE. We enable a secure future.

GARMOOSHA

A light unmanned aircraft designed to carry payloads of approximately 120 KG with an endurance of eight hours and 150 KM range.

Range: 150km

Endurance: 8 hours (including 30 minutes reserve)

Payload: 120kg

Maximum speed: 150km/h

MTOW: 540kg

Ceiling altitude: 10,000ft

QX-4

The QX-4 aerial vehicle is a modern tool for advanced intelligence, surveillance and reconnaissance (ISR) missions, featuring an extended endurance of up to 13 hours. With advanced autopilot and communication systems, the QX-4 can carry payloads of up to 7 kg, offering multiple mission scenarios to border control and military forces.

Endurance: 13hrs with 5kg Payload

Payload max: 7kg

Data Link Range: 150 km

Max speed: 140km/h

Engine Type:

VTOL: Electric

FWD: Gasoline

PHANTOMDIAB

A comprehensive, fully autonomous tactical solution engineered for continuous 24/7 aerial operations. Designed specifically for Defence and Homeland Security (HLS) applications, the Phantom Dock system integrates advanced drone technology, a cutting-edge Command and Control (C2) application, and a ruggedised ground station for seamless, mission-critical operation.

Docking station size: 2300mm x 750mm

Maximum take-off weight: 14kg

Payload: up to 5 kg

Endurance (with 0.5kg payload): 60 minutes

Range: 10 km

Autonomous operation: Take-off, landing, flight plan

Drone battery capacity: 864Wh

Service ceiling: 10,000ft

PHANTOMHAWK

Designed from bottom up The PhantomHawk is an high performance tactical system designed for continuous, long-endurance missions, ensuring unmatched ease of deployment and seamless logistical with a vertical takeoff and landing (VTOL) capabilities. Tailored to meet today's high demands of Defence and Homeland Security operations, the PhantomHawk offers superior ISR operational capabilities.

Maximum take-off weight: 32kg

Endurance: 12hrs with 3.5kg payload

Range: Up to 150km (can be extended)

Maximum Payload weight: 7kg

Engine type: Hybrid eVTOL + IC

Operating Temperature: -20°C to 50°C

Typical Operating Altitude: 5,000ft

Celling Altitude: 12,000ft

Wingspan: 4.0m

ANAVIA

HT-100

The ANAVIA HT-100 unmanned helicopter provides robust, world-class and flexible capabilities to a wide range of military, border control, special forces, civil defence and law enforcement missions. This powerful system features a maximum flight endurance of 5 hours and 600km, and payload capacity of 65kg.

MTOW: 120kg

Payload and fuel: 65kg

Max. speed: 120km/h

Operating ceiling

(max. density altitude): 4,000m

Communication range: 200km

HT-750

ANAVIA focuses on one key objective: ensuring customer satisfaction through innovative and reliable aircraft. With its endurance, cargo capacity and long range, the HT-750 stands as the world's leading heavy-lift unmanned VTOL system – ready for every mission, in every deployment.

Payload and fuel: 750kg (1,654 lbs)

Max. flight time: 15 hrs

Max. airspeed: 222km/h (119 kn)

Max. take-off weight: 1,150kg (2,536 lbs)

Operating ceiling (max. density altitude):

4,000m (13,123ft)

Turbine: Gas turbo-shaft engine

Typical empty weight: 400kg

SINYAR LAR3P

The FLARIS SINYAR-LAR3P is a rapid-deployable, high-speed and 18-hour endurance unmanned aerial vehicle with both combat and ISR capabilities. Economical and easy to transport with detachable wings, the aircraft can climb rapidly (108km/h) to quickly arrive at observation altitude and reduce speed for extended loitering.

With short take-off and landing capabilities, even from unpaved runways, the FLARIS SINYAR-LAR3P blends speed, endurance to perform intelligence, surveillance and reconnaissance tasks, maritime monitoring, search and rescue, electronic warfare and armed combat missions, and radio link transmission and retransmission.

Wingspan: 8.7m

Length: 8.3m

MTOW: 2,200kg

Payload: 610 kg

Endurance (clean configuration): 18 hours

Range: 6,000 km

Max speed: 650 km/h (TAS 350 kt)

Max altitude: 40,000 ft

ALLAG-TJ

The ADVANCED CONCEPTS ALLAG-TJ is a counter-drone system that provides protection against hostile aircraft operating at high altitudes, whether reconnaissance drones, loitering munitions, multirotor UAVs or other threats.

The ground-to-air system is designed to detect and intercept aerial vehicles operating at speeds up to 720km/h at altitudes from 3,000m (9,900ft) to 7,600m (25,000ft). The warhead offers fragmentation and cutting disc charge for enhanced lethality.

Wingspan: 340mm

Length: 1,650mm

MTOW: 25kg aircraft, 29kg with booster

Total available flight time: 5 +/- 1 min depending on mission profile

Cruise speed: 720km/h (depending on altitude)

Max altitude: 25,000ft (7,600m)

Engine: 32kg turbojet

Communication range (LOS): Up to 60km

Payload: 5kg

Warhead type: Fragmentation, cutting disc

Lethal Radius: 10m

Target Accuracy: <10m

Navigation: Ground-guided in cruise, self-guiding in terminal phase (seeker system)

THeMIS COMBAT

THeMIS Combat UGVs provide commanders the ability to enter high-threat situations to identify and engage known or perceived threats prior to human intervention. Since the enemy cannot allow unmanned combat vehicles freedom of movement, they force the enemy to reveal their positions by engaging the robotic system.

By destroying the first patch of enemy key assets and creating a hole in the enemy's defensive or offensive posture, THeMIS Combat UGVs enhance the effectiveness of manned assets by creating momentum that human troops can leverage with fewer casualties.

Dimensions: 240cm x 205cm x 190cm

Combat weight: 1810kg*

Additional payload weight: 570kg*

Max. speed: 20km/h

Ground clearance: up to 60 cm

Max. grade: 31 deg / 60 %

Fording depth: 60cm

Run time (hybrid, full internal tank): up to 15h

Run time (full load, silent mode): up to 1, h

Line of sight control range: up to 10km

* Depending on the final configuration

FLYER

THeMIS OBSERVE

The THeMIS Observe is built for tactical reconnaissance missions. The system includes a camera for day and night operations, an acoustic gunshot detector, smoke screen protection and a ground surveillance radar. Combining those systems allows units to make multi-sensor identification on one platform and react faster on emerging targets.

The THeMIS Observe has a low acoustic signature and low radio emissions and significantly increases a tactical unit's stand-off distance from enemy units whilst considerably increasing their capability and survivability.

Dimensions: 247cm x 205cm x 130cm

Weight: 2100kg

Max. speed: 20km/h

Ground clearance: Up to 60cm

Max. grade: 31 deg / 60 %

LRSOV

AJBAN LRSOV (Long Range Special Operations Vehicle) is an open top 4x4 vehicle especially suited to long range reconnaissance missions typically undertaken by Special Forces.

The vehicle has the following traits which places it as a leader in this category; Light and powerful, capable of accessing all terrains in addition to being helicopter underslung transportable. A Special feature of the vehicle is the open cab, which allows for the fitment of a variety of weapons and mission systems. The vehicle generic architecture will allow fitment of user supplied communications equipment. The vehicle is highly mobile with a high power to weight ratio, a stiff chassis and advanced independent suspension.

Engine power: 296 hp@ 2500 rpm

Engine torque: 1,100 Nm @ 1500 rpm

Transmission: 6-speed automatic

AL TARIQ LONG RANGE PRECISION GUIDED MUNITIONS

- Al Tariq is a strap-on bomb kit system, used on the Mk-80 family of standard aircraft bombs
- The weapon system provides the user with all-weather, day and night operational capabilities, utilizing
 - GNSS guidance
- Increased targeting accuracy through:
 - Semi-active laser (SAL) seeker
 - Imaging infrared (IIR) seeker
- Hybrid GPS/INS navigation
- Accuracy (excluding Target Location Errors):
 - 10m CEP GPS/GNSS-INS only (C/A code)
 - 2m with IIR seeker
 - 3m with SAL seeker
- Programmable attack angle in azimuth and elevation
- Standard 14" inch bomb rack interface to aircraft
- Fits Mk-80 family of standard NATO warheads
- Long range up to 120km
- Modular with more than 20 configurations based on required missions
- Provide anti-jamming solutions
- Height of Burst sensor integrated

BROCHURE

GRENADES

Condor produces specialised grenades for both indoor and outdoor use. Both types use a dual-stage system on rubber-bodied grenades that ejects the trigger before the main charge explodes. The grenades incorporate multiple rubber spheres, with different products to control crowds in different settings and situations. Some grenades feature powerful stun and impact charges; others produce dense smoke. Both types also can incorporate lachrymatory and pepper components.

BROCHURE

PYROTECHNICS

Due to their high-deterrent power, Condor's controlled-impact munitions, including rubber bullets, provide an effective, last-step non-lethal alternative to conventional ammunition in crowd-control settings. Condor rubber bullets for use against individuals and groups are available in 12 mm, 37/38 mm and 40 mm calibre.

Condor's lachrymatory, pepper and smoke ammunition has been developed for launch over obstacles, such as walls and barricades, to disperse disruptive crowds. Ammunition is available in 12 mm, 37/38 mm, 37/40 mm and 40 mm calibre. Condor also has developed ammunition for use in 40 mm launchers to provide forces with greater flexibility, and higher accuracy and effectiveness.

CARACAL F GEN II

The CARACAL F Gen II semi-automatic pistol reflects exceptional firearm innovation. Its integrated solid slide, refined trigger, and MIL-SPEC picatinny rail provide complete operator confidence.

Calibre: 9 x 19mm

Operating principle: Short Recoil, Locked-Breech

Modes of fire: Semi-auto/Manual safety optional

Trigger type: Short double action

Magazine: 18 rounds

Barrel length: 105mm

Weight w/o magazine: 690g

Grip frame: Black, polymer storage compartment

CMP9 SMG

The CMP9 is a modern and modular submachine gun chambered in 9x19mm, serving diverse missions with barrel options of 5.5" or 9". An ideal choice for law enforcement and special forces, the firearm is designed for compact close-range operations and excels in urban combat and precision engagements. Its discreet CMP9 Short variant supports concealed carry, ensuring constant preparedness.

Calibre: 9 x 19mm

Operating principle: Advanced blowback system

Modes of fire: Safe -semi-automatic - fully automatic

Trigger type: MIL-SPEC

Magazine: 30 rounds

Buttstock: No stock/telescopic/foldable/AR style

Barrel length: 5.5" / 9"

Weight w/o mag: Varies per barrel length and stock

FLYER

CAR 816

The CAR 816 is a tactical rifle, chambered in 5.56x45mm NATO, with barrel lengths ranging from 7.5" to 16", and features adaptable rails. This modular weapon functions in diverse scenarios, from close-quarters combat to dynamic.

Calibre: 5.56 x 45mm NATO

Operating principle: Gas-operated, short-stroke gas piston system, rotating bolt

Modes of fire: Safe, semi-auto, fully auto

Trigger type: MIL-SPEC, 3.4-5.5 kg

Magazine: 30 rounds

Buttstock: Retractable – 6 positions

Barrel length: 7.5"/10.5"/14.5"/16"

Weight w/o magazine: 3Kg/3.3kg/3.5kg/3.6kg

CAR 817 DMR

Tailored for designated marksman roles in an infantry squad, the CAR 817 DMR exemplifies the modern high-precision rifle, bridging the engagement range between a service rifle and a dedicated sniper platform. Chambered in the 7.62x51mm NATO and .308 WIN calibres, and barrel length of either 16" or 18", this rifle is flexible enough for SWAT teams, squad-level military deployments, and marksmen.

Calibre: 7.62x51mm NATO (.308 WIN)

Operating principle: Short-stroke gas piston system

Modes of fire: Safe and semi-auto

Trigger type: 2 stage trigger SSA 1.4 - 1.5 kg

Magazine: 10/20 rounds

Buttstock: Precision sniper buttstock

Barrel length: 18"

Weight w/o magazine: 4.96Kg

KATIM TACTICAL MOUNTED SDR RADIO

KATIM's Tactical Mounted SDR Radio is a robust and versatile communication solution designed for vehicle-mount applications. Supporting both MANET and point-to-point communication, this SDR-based architecture radio excels in harsh environmental operations. Its dual-channel RF bearer capability ensures seamless crossbanding between two frequency bands, making it the ideal choice for tactical datalink applications.

- Operating Frequency 30MHz to 2700MHz
- RF Output (100W V/UHF, 50W L/S)
- Waveform Supported: PSK, OFDM
- MANET Supported
- 2x2 MIMO Configuration
- Channel Bandwidth: Narrowband (Up to 75KHz), Wideband (Up to 8MHz)
- Embedded Encryptor Module
- Supports H.265, G.729
- Interface: N-type (RF), Ethernet (Data/Management)
- MIL-STD 810, MIL-STD 461 compliant

DISCOVERY

THE FUTURE OF EXPOSURE MANAGEMENT

DISCOVERY, an award-winning platform helps critical entities gain visibility into their external attack surface and public enterprise digital assets. It is used by nation-scale level organizations to continuously monitor and identify vulnerabilities, misconfigurations, and other security issues 24x7x365.

With DISCOVERY, leaders can rest assured that their organization's external environment will be constantly monitored for security issues.

UNIQUE FEATURES

- **Exposed asset mapping:** Perform automated full mapping of exposed assets. Get visibility into domains, sub-domains, hosts, asns, netblocks, mail servers, name servers etc. Identify and map relationships.
- **Technology stack:** Get full visibility into the entity technology stack. Using inhouse ~12k rules we can identify over 80k technology platforms. Additional details like open ports, dns, iocs are also available.
- **Issues identification:** Get visibility into vulnerabilities at host, app and cohosting level. Coverage of over 150k known cves along with details of various security misconfigurations.
- **Breached credentials:** Cover over 3800+ up-to-date global breaches to identify 25b+ breached credentials (username, cleartext passwords, hashes, breach name among others).
- **Typosquatted domains:** Use machine learning to identify domains that are similar to entity domains and can be used for malicious purposes (phishing, typosquatting).
- **Actionable insights:** Provide actionable insights to the leadership team via variety of dashboards, remediation overviews and infrastructure change timelines.

DNS FIREWALL

SIMPLIFY DNS BASED SECURITY

DNS FIREWALL, an award-winning platform protects users from malware, unauthorized or inappropriate web content and taking actions in real time to mitigate malicious threats and help your organization defend against DNS- based attacks.

Cost-effective and easy to operate, our solution monitors all outgoing DNS traffic from an organization's on-premises and remotely operated computers, tablets, smart sensors and equipment – ensuring those endpoint devices do not access dangerous website.

Implemented from a single software platform, DNS FIREWALL uses machine learning, artificial intelligence and advanced algorithms to assess, in near-real time, the destination of all outbound DNS traffic.

UNIQUE FEATURES

- **Malicious host identification:** Enhance defense in depth by blocking endpoints from accessing malicious hosts like c2 domains, malware, phishing, ransomware, spyware sites. Filter dga activity & block newly registered domains.
- **Content restrictions:** Allow clients to block access to domains based on parameters like content categories (e.G. Social media, gambling, sports, religion etc.), Geolocation, privacy etc. Configure allow and block lists.
- **Quarantine:** Allow clients to perform a triage after an incident to identify devices that accessed a malicious domain and quarantine them
- **Easy deployment:** Easy deployment that reduces downtime. Supports various mdm applications for smooth deployment.

CYBER360

COMPLIANCE AT SCALE

CYBER360, an award-winning compliance platform that helps organizations to evaluate compliance to various cybersecurity standards (UAE IA, ISO 27001, PCI-DSS, NIST800-53 among others.), track gaps and identify areas requiring greatest focus.

With CYBER360, you can streamline your cybersecurity processes, identify, and mitigate risks, and maintain compliance - all from a single and integrated platform.

Our user-friendly interface and powerful features make it easy for your team to stay ahead of emerging threats and enhance the security maturity of your organization.

UNIQUE FEATURES

Uncover the comprehensive capabilities of CYBER360 that empower your organization to streamline cybersecurity processes, identify and mitigate risks, and maintain compliance with ease.

- **Comprehensive cybersecurity management:** Gain full visibility into your organization's cyber security posture. Track, manage and monitor status across various security controls.
- **Easy regulatory compliance:** Automate compliance assessments and reporting against various industry standards, including UAE Information Assurance (IA) Regulation, ISO 27001, PCI DSS, among others.v
- **Scalable and flexible:** Scale effortlessly as your organization grows. Drive automated technical assessments via integration with our automated Cyber Exposure Management platform DISCOVERY.
- **Expert support and guidance:** Access to a dedicated team of cybersecurity experts based in the UAE, with excellent understanding of organization's GRC needs and trends.

V - PROTECT

The SIGN4L V-Protect is a state-of-the-art, mobile, active/reactive high-power jammer system designed to protect vehicles, particularly against remote-controlled improvised explosive devices (IEDs) and drones. This system enables jamming of all common terrestrial and drone RF signal technologies.

Featuring a typical jamming ratio for single threats of ³1:1 and up to 16 wideband jammers for simultaneous operation across all bands, this powerful system is fully self-contained on the vehicle once installed.

- Mobile operation
- Fully self-contained on vehicle once installed
- Jamming of all frequencies associated with radios, walkie-talkies, mobiles and Wi-Fi across the 20 MHz to 6 GHz bands.
- Up to 16 wideband jammers for simultaneous operation across all bands
- Both active/reactive jamming for maximum coverage
- Typical jamming ratio for single threats ³ 1:1

NAVCONTROL

NAVCONTROL system uses the most advanced GNSS jamming and spoofing measures to provide robust defence against hostile unmanned aerial vehicles. With a typical range of 50km for unprotected platforms, the system is ideal for use along borders and at other strategic locations.

The system produces GNSS denial and emulation signals to safely distance unmanned vehicle threats. The system provides jamming and spoofing of GNSS signals to simulate a contradictory alternative path, thereby protecting an intended area of interest.

- Jams the full GNSS spectrum
- Spoofs commercial GNSS spectrum to protect a specified area of interest
- Combination of jamming and spoofing capability for maximum coverage range
- Typical jamming and spoofing range for unprotected GNSS platform up to 50 km*
- System fitted into customised, standalone, air-conditioned racks

BROCHURE

D-PROTECT

D-Protect is an advanced RF and GNSS jamming and spoofing solution that targets drone control to deliver an effective counter-drone solution for enhanced security and control in sensitive areas.

Covering the full GNSS spectrum and targeting command and control, the system has a typical jamming range for unprotected GNSS platforms of up to 10 km. D-Protect is contained in a customised, standalone, air-conditioned case (shared).

- Jams full range of GNSS spectrum
- Jams UAS C2 channels
- Option to spoof a range within the GNSS spectrum to protect an area of interest

ELECTRONIC WARFARE | ELECTRONIC PROTECTION PRODUCTS

SIGN4L

GPS-PROTECT 2

Designed for small form factor requirements, the SIGN4L GPS-Protect 2 uses advanced digital signal processing and array antenna technology to effectively protect GPS receivers from RF interference and/or strong jamming signals.

- Small form factor for mini-UAVs, drones, guided weapons, and portable GNSS receivers
- Counters narrow band (NB) and broadband (BB) jammers
- Compact anti-jamming module
- Three antenna options
- Works with legacy GNSS L1 receivers
- Powered with 12VDC through RP-SMA connector
- Easy installation

BROCHURE

GPS-PROTECT 4

The SIGN4L GPS-Protect 4 uses advanced digital signal processing and array antenna technology to effectively protect GPS receivers from RF interference and/or strong jamming signals. Encased in a ruggedised mechanical housing, it is ideal for platforms operating in harsh environments.

- Counters narrow band (NB) and broadband (BB) jammers
- Anti-jamming module provided in ruggedised mechanical housing designed to withstand harsh environments
- Customised antenna enclosure to best fit specific platforms
- Works with legacy GPS receivers
- Easy installation

BROCHURE

ACTIVECELL-SAR

SIGN4L has developed an aircraft-mounted cellular system for search and rescue operations using a fully software-defined radio. This system can locate targets over 2G (GSM), 3G (UMTS), 4G (LTE) and 5G (NSA) networks.

- Mobile Operation: Compact design facilitates installation on manned or unmanned aircraft
- UI and UX: Pre-programmed missions are possible with the easy-to-operate system
- Robust: Up to 8 high-power base stations for simultaneous transmission across all available networks

BROCHURE

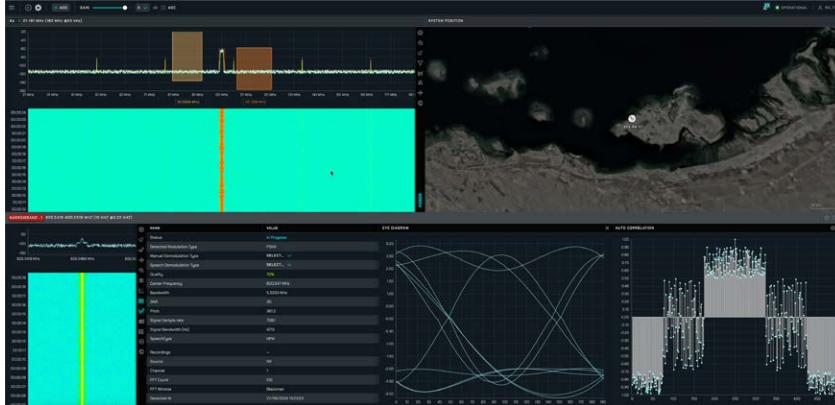

WIFINDER

WIFINDER is a family of tactical solutions that give law enforcement and homeland security organisations a powerful tool to investigate and gather data intelligence from target devices across the Wi-Fi spectrum.

- Significant capture range
- Discrete and portable form factor
- Real-time collection of Wi-Fi emitters and metadata

ELECTRONIC WARFARE | ELECTRONIC PROTECTION PRODUCTS SIGN4L

COMINT

The SIGN4L COMINT solution is designed to capture and analyse signals across a wide frequency range, including UHF/VHF frequencies. With real-time tracking of all signals, COMINT ensures operators and commanders can respond quickly and effectively to signal intelligence.

Key features

- Real-time signal tracking of all signals
- Frequency range 20MHz – 6000MHz
- Intuitive tactical system user interface
- 2-channel instantaneous capture

COMJAM

The SIGN4L COMJAM system is a communication jammer and radio monitoring system for fixed-site or mobile electronic warfare and radio monitoring purposes, where primary detection of narrow-band and spread-spectrum signals is effectively countered by wide-band jamming capabilities.

Key features

- Communication jammer of RF spectrum from 20 MHz to 6 GHz
- Typical jamming ratio for single threats \rightarrow 2:1
- Intuitive command and control software for effective operation

ELECTRONIC WARFARE | ELECTRONIC PROTECTION PRODUCTS SIGN4L

FLYER

SKYSHIELD

The SIGN4L SKYSHIELD is a fixed-deployment, state-of-the-art counter-UAS solution contained in a compact, environmental cabinet. It is a high-power RF and GNSS jamming system designed to jam drone frequencies, with a combination of jamming and spoofing for maximum coverage.

The typical jamming range for unprotected GNSS platforms is up to 10 km, while the solution jams the full GNSS spectrum, as well as drone command and control channels with a typical jamming performance of 2:1 from a drone's remote control.

- Standalone air-conditioned cabinet
- Detects and identifies UAVs
- Jams the full GNSS spectrum and drone's command and control channels
- Spoofs commercial GNSS spectrum to protect a specified area of interest
- Combination of jamming and spoofing capability for maximum coverage
- Typical jamming range for unprotected GNSS platform up to 10 km
- Typical jamming performance for command-and-control channels is 2:1 from drone's remote control

SKYSHIELD-TM

SKYSHIELD TM is a state-of-the-art, trailer-mounted counter-UAS solution that is ideal for quick mobile deployments that combine jamming and spoofing for reliable point protection with the option of external power source for fixed deployment operation.

Detect and identify UAS platforms

- Jams the full GNSS spectrum and drone's command and control channels
- Spoofs the full commercial GNSS spectrum to protect a specified area of interest
- Typical jamming range for unprotected GNSS platform up to 10 km (medium range coverage)
- Typical jamming performance for command-and-control channels is 2:1 from drone's remote control

SKYSHIELD QD

The SIGN4L SKYSHIELD QD is a state-of-the-art, 4x4 vehicle-mounted counter-UAS solution that is ideal for quick mobile deployment to on-road and offroad locations with the option of external power source for fixed deployment operation.

- Detect and identify UAS platforms
- Jams the full GNSS spectrum and drone's command and control channels
- Spoofs the full commercial GNSS spectrum to protect a specified area of interest
- Typical jamming range for unprotected GNSS platform up to 10 km
- Typical jamming performance for command-and-control channels is 2:1 from drone's remote control

HIGH LANDER

FLYER

VEGA UNCREWED TRAFFIC MANAGEMENT (UTM)

Vega UTM provides real-time airspace awareness enabling coordination of drone fleets and traditional air traffic at any scale.

Vega approves and denies flight plans, identifies and mitigates conflicts, and bolsters traditional air traffic management systems to provide the digital infrastructure the world needs to create a consolidated sky.

The solution provides an intuitive dashboard that can be accessed via desktop or mobile. It displays rich, real-time data that airspace managers use to make informed decisions, including drone flight plans and ID, real-time telemetry, NFZs, weather conditions, and more.

FEATURES INCLUDE:

- **Live monitoring and identification:** Gathers data from a range of sources to display telemetry on a real-time map and enable conformance monitoring via a central platform.
- **Flight plan approvals:** Provides a central portal for pilots to submit flight plans and autonomously approves, denies or alters them for safe and efficient traffic management at scale.
- **Geo-awareness:** Enables airspace managers to seamlessly define and share airspace constraints for dynamic airspace control.
- **Tactical deconfliction:** Dynamic conflict prevention, preventing problems that arise mid-mission.
- **NCTR:** Integrates with drone radar and soft-kill solutions for complete airspace control and protection of sensitive sites.

FLYER

ORION DRONE FLEET MANAGEMENT

Orion DFM is a drone-agnostic software platform that gives you complete command over your drone fleet, no matter the size.

Create missions via the intuitive dashboard and watch in real time as your fleets carry them out autonomously - or take direct command from anywhere in the world.

With no limit to the number of drone missions the platform can run simultaneously, Orion is a powerful and versatile tool that broadens the planning horizons and mission possibilities for all types of multi-drone operations, whatever the terrain or situational constraints.

FEATURES INCLUDE:

- **Payload control:** Direct control of drone hardware from the dashboard - gimbal adjustment, delivery units, speakers, microphones, etc.
- **Cockpit mode:** Manual control of in-flight drone with a pilot's eye view from the camera. Drones can be operated from thousands of miles away.
- **Share link:** Creates a web link to the live video stream of any of your drones for sharing with third parties as required.
- **Object detection:** Detects, identifies and counts people and vehicles. Drones can also track a chosen object even if it is moving quickly.
- **Hot replacement:** Autonomous dispatch of a replacement drone when an in-mission drone is low on battery, for seamless mission continuity.
- **Collision avoidance:** Real-time monitoring and automated navigation adjustments to prevent mid-air conflicts.

MIRSAD NG

MIRSAD NG is an advanced land system designed for automatic detection, recognition, and identification in various environmental conditions. It is optimized for maximum sensor range performance, using highly sensitive sensors and advanced video enhancement algorithms. The system can be integrated with other solutions, providing a comprehensive approach to defence and homeland security operations.

- Cooled Mid-wave IR camera with continuous optical zoom.
- Compact Shortwave IR spotter.
- Wide and Narrow FOV Full High-Definition Day Camera
- 2-axis Gyro-stabilized pedestal.
- Motion range of 360° pan and -35° to +20° or -10° to +70° tilt.
- Laser pointer and optional Eye-safe laser range finder.

ALQ-500P

The ALQ-500P is an ESM/ECM airborne pod that features state-of-the-art DRFM and ECM techniques. Compatible with fixed- and rotary-wing aircraft and both supersonic fighter and low-speed UAV flight profiles, the ALQ-500P can protect a wide range of aerial platforms from diverse radar-guided threats.

Dimensions (L x W x H): 3.3 m x 0.45 m x 0.42 m

Aircraft type: Fixed wing (fighter, transport, mission), Rotary wing and UAVs (medium/big)

Weight: 290 kg

Power consumption: 2.1kVA (115VAC 400Hz) 30W (28VDC)

Frequency range: 2-18 GHz

Other characteristics: State-of-the-art DRFM and ECM techniques

Making sure platforms and systems are primed for every mission by providing world-class, best-practice lifecycle maintenance, repair, overhaul and engineering – no matter the requirement or timeline.

MRO | MAINTENANCE REPAIR & OVERHAUL SERVICES

ADSB
ABU DHABI SHIP BUILDING

MAINTENANCE & REPAIR

We offer maintenance and repair services for the military vessels operating in the region. Our qualified and experienced workforce, modern infrastructure and processes enable us to repair and upkeep vessels to stringent marine standards and testing requirements. Our key services include midlife, major, and navigational refits, dry-docking, overhauling of all types of main and auxiliary machineries and the maintenance of Nav-Com equipment and Weapon Systems.

THROUGH LIFE SUPPORT (TLS)

We deliver customized TLS services to ensure the operational readiness and long-term sustainability of military ships. Our TLS offerings cover the entire lifecycle of the vessels and it includes engineering and development of ILS elements, In-Service Support, Class Management, Maintenance Management, Refit Management, Inventory & Supply Support Management, Data Management, and the Management of Workshops & Technical Stores. Our TLS services ensures the highest level of mission readiness throughout the operational life of the vessels, while optimizing their Life Cycle Cost.

MRO
SERVICES
ADSB
ABU DHABI SHIP BUILDING

MECHANICAL SERVICES

Our mechanical shop is equipped with sophisticated machine tools, cranes and an environment controlled workspace. Our highly-skilled machinists, millwrights and mechanical fitters offer specialist repair, refurbishment and maintenance, ensuring rapid turnaround, quality and efficiency.

We can repair and overhaul main and auxiliary engines, bow thrusters, propulsion systems, rudders, hydraulic machinery, valves, pumps, coolers and heaters and more.

PIPING WORKSHOP

Our piping workshop offers services such as profile cutting, pipe bending and fitting, and welding procedures. It houses the latest automated equipment for indoor prefabrication before transferring to vessels for installation. Other equipment includes:

- Overhead cranes
- Pedestal grinding machines
- Hydraulic pipe bending facilities
- Pallet lifters
- Drilling machines
- Speed cutter
- Blasting machines
- Thread cutting equipment

MRO

PRECISION ENGINEERING

Offering state-of-the-art manufacturing and consulting services for top-of-the-line, highly engineered and complex components, delivered through precision processes to customers in the aerospace, defence and commercial sectors.

PRECISION ENGINEERING SERVICES

EPI

FLYER

MANUFACTURING ENGINEERING

We support product development from early-stage capacity studies and prototyping, to final manufacturing and production process design. Making this possible are EPI's highly skilled team of:

- CAD/CAM Designers and Programmers
- Manufacturing and Application Engineers
- Toolmakers

CUTTING TOOL MANUFACTURING

All our cutting tools and re-sharpeners come with the assurance of quality and precision.

We have an advanced technology edge to produce high-quality tools for all types of operations, such as milling, drilling, reaming, etc. Further, our capabilities extend to measuring, inspection, and other critical functions such as:

- Custom-made cutting tools for all operations
- Manufacture and re-sharpening of carbide and HSS tools
- Five-axis cutter grinders to tool re-sharpening
- Self-measurement probes and 3D simulators
- Measuring and inspection of cutting tools

PRECISION ENGINEERING SERVICES EPI

CALIBRATION LAB

Dimensional, force, torque, electrical, furnace We perform in-house calibration for equipment within our scope of processes (excluding master equipment). This may include covering dimension force, torque, electrical, and furnace.

Our calibration offering is handled by our dedicated software platform that tracks all related data and notifications. This allows recall of equipment as per the defined verification period, supported by a qualified team.

INSPECTION AND LABORATORIES

We make sure that all our products and manufacturing processes are constantly monitored and controlled to meet our internal and customer needs. That's why we focus on training our employees for operator qualifications and reassessment programmes. This helps us promote self-inspection deployments across departments.

Our Statistical Process Control framework goes a step further by helping us improve sampling methods and redefines key characteristics required to ensure alignment with our Quality Policy.

Our inspection process is handled with conventional equipment like:

- Vernier caliper
- Micrometres
- Digital height gauge measuring equipment
- Coordinate Measuring Machines (CMM) Up to 7m in length
- Hexagon machine with PCDMIS for offline programming

PRECISION ENGINEERING SERVICES EPI

SURFACE TREATMENT

Revolutionizing Surface Treatments with EDGE's EPI Solutions.

Our special process engagements are carried out at two main shops with an overall footprint of approximately 8000 square metres.

- Chemical Processing
- Non Destructive Testing
- Surface Enhancement
- Paint Process
- Part Marking
- Laboratory

FLYER

METALLIC LABORATORY

We are equipped to control the properties of materials, including various aluminium grades, titanium, steel and stainless steel, to meet industry benchmarks. We achieve this through monitoring that includes incoming inspections, detailed inspection during the parts manufacturing stage, and review following heat-treatment processes.

Our test capabilities include:

- Material surface hardness with machines capable of achieving Vickers, Knop, and Rockwell A, B, C methods
- Microstructure analysis (including moulding)
- Chemical analysis with spark optical emission spectrometer (OES)
- Electrical conductivity measuring of non-ferrous material (aluminium grade/Eddy currents)

PRECISION ENGINEERING SERVICES EPI

MACHINING AND ASSEMBLY

Precision machining solutions to meet key industry requirements.

Our machining capabilities are designed to meet key industry requirements with the following offerings:

- Three-and five-axis milling machining soft and hard materials
- Turning
- EDM
- Laser , TIG , MIG and ARC welding
- Rectification process (roll forming, shot peening by ultrasonic and blasting)

EPI also offer equipping and Sub-Assemblies process:

- Faster installation
- Torqueing
- Bushing
- Bearing installation

ENGINEERING SOLUTIONS

Our manufacturing engineering solutions include:

- Process capability studies
- Precision machining
- Industrialization
- CAD/CAM programming
- Application engineering
- Manufacturing process design
- Production process development

PRECISION ENGINEERING SERVICES HALCON

BROCHURE

ADVANCED MANUFACTURING

HALCON's Special Manufacturing Division boasts cutting-edge facilities with 5-7 axis CNC machines, laser cutting and welding, a quality assurance lab and plastic injection moulding.

From nano-sized to half a metre in length, our Special Manufacturing Division can cut, shape and create from all types of metallic parts, including specialised aluminium machining. Adding to these advanced capabilities, fast production is supported through automated in-house robotic solutions

SURFACE TREATMENT

HALCON's Special Manufacturing Division offer comprehensive turnkey surface coating and painting solutions for small to large components and equipment. With superior technology, including the UAE's only cathodic electrodeposition (CED) coating facility, and years of experience, we are the leading local expert in providing military-grade anti-corrosion protection that helps you assure performance.

Our surface treatment capabilities include:

- Cathodic Electro-Deposition (CED)
- Chromate Conversion (Type II, Class 1A & Class 3)
- Anodizing (Type II & Type III)
- Zinc Plating (Type V & VI)
- Phosphating (Type M & Class 2)
- Passivation (Nitric)
- Quench Polish Quench (Nitriding)
- Testing Lab

PRECISION ENGINEERING SERVICES **HALCON**

ELECTRICAL MANUFACTURING

HALCON's Special Manufacturing Division turnkey solutions in state-of-the-art printed circuit board (PCB) and cable harness production. The specialised facilities deliver products built to perform in the most demanding operational scenarios.

Our PCB production facility is a 2800 square metre smart factory that is capable of board assembly, system integration, quality assurance testing and mass production of single-sided, double-sided and multi-layered PCB's up to IPC class 3.

Our cable and wiring harness facility produce customised cable and wire harnesses, and provide engineering design services for all types of electromechanical, power supply, industrial or other uses. The harnessing production line serves customers in industries such as telecommunications, oil and gas, healthcare and defence with electronic assemblies that deliver exceptional reliability and durability.

BEACON RED offers mission-relevant Language Training Solutions in various languages and dialects to support critical mission accomplishment in technical and professional fields.

We offer synchronous and asynchronous Language Training Solutions, ranging from basic acquisition through advanced enhancement to include immersions, isolated immersions, scenario-based training, critical thinking, and analysis.

TRANSLATION SERVICES

BEACON RED offers bespoke Translation and Interpretation Services to help clients achieve their international ambitions. With a team of expert linguists and advanced content management systems, we deliver precise communication of key messages and client intent. Our comprehensive language solutions include document translation, telephonic interpretation, video call and face-to-face transcription, proofreading, web localisation, and services in over 60 language pairs. Tailored to meet unique visions, our services ensure the highest standards of linguistic excellence.

DUE DILIGENCE

Sensitive positions in your organisation are a security imperative and must be encompassed by trust and resiliency. Our Due Diligence service provides extensive background verification capabilities and bespoke services for due diligence/background investigations. Whether for individual hiring, inclusive of all background check elements and personnel threats, or vendor, third party, and access checks, BEACON RED ensures that every aspect of your daily interactions and hiring process is vetted and verified.

NATIONAL SECURITY CAPABILITIES

NSC excels in addressing national security challenges through innovation, strategic partnerships, and thought leadership. With a deep understanding of client needs, we deliver turnkey solutions for governments and adjacent entities worldwide. Our offerings include intelligence services, Digital Overwatch, BEACON RED Intelligence Cell, and due diligence for personnel and supply chains. Additionally, we provide training and advisory services to enhance capabilities in law enforcement, intelligence, critical infrastructure, and specialist skills. By remaining at the forefront of national security, we aim to deliver high-quality capabilities that meet evolving global demands.

NATIONAL SECURITY IN A BOX

BEACON RED's National Security Centre of Excellence is a comprehensive solution for all national security missions. The Centre is comprised of training, advisory support and technology that can scale and expand to absorb additional missions, delivered by elite professionals.

BEACON RED provides technical and behavioural assessments of employees and compares their skillsets against competencies with detailed insights into areas for staff development.

PROFESSIONAL DEVELOPMENT

We provide a comprehensive range of professional development services to prepare individuals and teams for future leadership and management challenges. With extensive experience and a vast library of courses, we offer tailored, workplace-focused training pathways for staff at all levels. Our programmes include nationally and internationally accredited awards, certificates, and diplomas, delivered in partnership with leading UAE and UK awarding bodies such as ACTVET, Highfield International, ILM, CMI, and CIPD.

LANGUAGE DEVELOPMENT

Online English Language development courses support exam preparation for University and Immigration-related cases. Additionally, BEACON RED offers development courses for business language skills which enhance report writing and professional language needs in the workplace.

TRAINING SOLUTIONS

BEACON RED empowers next-generation professionals with innovative training solutions designed to inspire and develop individual talent. Leveraging a diverse team of subject matter experts, we deliver comprehensive curriculums and cutting-edge training platforms. Recognised by Anthology with Catalyst Awards in 2023 and 2024, our best-in-class e-learning suite supports individual and organisational development goals. Combining expert knowledge, instructional design, and advanced educational technologies, we create interactive, engaging content focused on practical application and real-world case studies. Our tailored training solutions ensure measurable workplace benefits, making us a leader in professional development.

UAE NATIONAL QUALIFICATION PROGRAMMES

BEACON RED is an Approved Training Provider (ATP) under ACTVET & Ministry of Education.

As an ATP, we support partners to create, accredit and deliver entity specific programmes that are nationally recognised via the national vocational qualifications framework, providing learners with job-ready skills needed to excel in the workplace and a national qualification as recognition of their learning.

NATIONAL QUALIFICATION DEVELOPMENT

BEACON RED can support accrediting corporate training programmes so that they are recognised nationally or internationally. This adds value by facilitating pathways to further education or future learning, if required.

TRAINING & SERVICES

SERVICES

BEACON RED

ACCREDITED APPRENTICESHIP PROGRAMMES

Working with NAFIS, we can develop nationally accredited qualification programmes at a Certificate, Diploma, Bachelors and Masters level to support the development of Emirati professionals to ensure that your organisation has a talent pipeline of high-calibre candidates.

MISSION TECHNICAL ACADEMY (MTA)

As global threats grow more sophisticated, the technical expertise required to counter them must evolve. BEACON RED's Mission Technical Academy prepares the next generation of national security professionals to confront future challenges with mental fortitude and the most advanced skills and techniques.

ACCREDITATION SERVICES

BEACON RED drives the expansion of accredited training in defence, security, and law enforcement sectors by offering both existing national and international qualifications and developing new UAE-specific vocational programmes to address existing gaps. Our services include Qualifications Development, and Accreditation Advisory & ATP Compliance.

Committed to enhancing vocational education, we deliver impactful training aligned with national and international benchmarks.

ADVANCED PSYCHOMETRICS AND ASSESSMENT

BEACON RED uses a systematic, data-driven approach to enhance workplace performance by evaluating individual potential through advanced psychometric testing and assessments. Our methods identify unique traits that drive agile performance while highlighting potential risks, enabling decision-makers to improve recruitment and selection processes. By leveraging dynamic talent analytics, industry expertise, and research, we uncover workforce trends and predict vulnerabilities, empowering clients to make informed, strategic talent management decisions. Our solutions deliver actionable insights for mission-critical talent-related decisions, transforming how organisations identify, develop, and retain top talent.

PEOPLE ANALYTICS SYSTEM (PAS)

The People Analytics System (PAS) is a proprietary testing platform by BEACON RED that allows our People Analytics team to administer tailored assessments electronically, either unsupervised or proctored. It hosts and administers psychometric and aptitude testing by leveraging advanced technologies to assess complex higher order cognitive and personality constructs. The PAS platform is hosted fully in the UAE on our on-premise highly secure servers.

HUMAN PERFORMANCE OPTIMISATION

We offer a holistic approach to personal growth, empowering individuals to achieve their full potential across all aspects of life and enhancing organisational effectiveness. Our bespoke programmes focus on five key areas: Physical Health and Fitness, Mental Clarity and Focus, Emotional Regulation, and Spiritual Growth Peak Performance. This integrated approach motivates lasting change and maximises individual and team potential.

SERVICES

BEACON RED

MISSION TECHNOLOGY

GRC SERVICES

Governance, Risk, and Compliance (GRC) is the backbone of a resilient and forward-thinking organisation. By integrating robust governance frameworks, proactive risk management, and unwavering compliance, GRC empowers businesses to navigate complexities with confidence. BEACON RED's team of international subject matter experts have not only led GRC programmes across all industries, but have worked closely with governments to develop forward-thinking nation-wide policies. At BEACON RED, we believe that security exists to empower the organisation to achieve its goals. Trust our GRC team to elevate your operational standards and safeguard your enterprise with precision and expertise.

TSS

BEACON RED's Technical Security Solutions teams design and deploy complex security centric systems and solutions that provide advanced security management capabilities for enterprise and homeland security initiatives. Such initiatives include solutions for Critical Infrastructure Protection, Safe City and Digital Twin Initiatives, Wide Area Monitoring and Response, Waterways Protection and Border Monitoring Projects. BEACON RED tailors the solutions to maximise customers' capabilities by bundling Technology, Tactics and Procedures for complying with best practices and most advanced threat management response.

TSCM

BEACON RED provides tailored and unique capabilities in the region by offering Technical Surveillance Counter Measures services and solutions. TSCM services are provided for periodic TS inspections in executive offices and areas subjected to potential TS threats. BEACON RED TSCM teams equally design and deploy RF shielded environments such as required in SCIF, Secure Communication Rooms and Research and Industrial Facilities which require protection from radio emissions.

SPECTRUM DOMINANCE

BEACON RED RF specialists provide a wide range of spectrum related services such as Broadband Spectrum analysis, Wi-Fi spectrum optimisation, RF Hunting, and persistent TSCM monitoring. BEACON RED StratoScout and StratoScout AI solutions are designed for corporate enterprises, as well as other civilian and military applications. BEACON RED StratoScout and StratoScout AI solutions can be land-based, sea-based or encapsulated into autonomous monitoring solutions.

ADVISORY SERVICES

BEACON RED provides tailored security centric Advisory and Professional Engineering Services to corporate clients and governmental agencies. Such engagements contribute to clients' capability development or provide instant subject matter expertise in specific missions. Missions include Infrastructure Development, Front-End Engineering, Safe City Initiatives and Complex Communications Systems Development.

TRAINING & SERVICES

SERVICES

BEACON RED

MISSION ENGINEERING

At the backbone of technology, Mission Engineering forges and shapes the future of national security and homeland security in the LEA, intel and military domains by building and engineering state-of-the-art technical solutions. From data centres to fly-away-kits, Mission Engineering integrates cutting edge technology, supporting missions aligned with client needs, turning aspirations and possibilities into reality. Mission Engineering has successfully built strategic and tactical integrated solutions to support and strengthen national security matters, uniting technology and innovation, enabling our clients to fight the odds, protect and defend nations.

INTEGRATION SERVICES

BEACON RED specialises in delivering comprehensive solutions integration across diverse technology domains, including cyber and physical security, technical security services, and command and control systems. Our technology-agnostic approach ensures that we identify and implement the best solutions tailored to customer specific needs. By leveraging a wide range of technologies and partnering with leading vendors, we provide customised, efficient, and reliable integration services that enhance security and operational efficiency.

CWE-NET

The Classified Workspace Environment Network (CWE-Net) is a secure turnkey solution designed to protect sensitive data, IP, and corporate trade secrets while meeting stringent industry standards, including NIST, NISPOM, FIPS, and UAE IA. It features an air-gapped network infrastructure tailored to customer needs for rapid implementation and enables secure collaboration across entities. CWE-Net supports SECRET and TOP SECRET data with advanced capabilities such as SMIME-encrypted email services, watermarking, data classification, sandboxing, and one-way diode data ingestion. Its military-grade shockproof racks with hyper-converged infrastructure ensure portability and resilience. This solution provides organisations with robust tools and security to meet mission-critical demands.

GUARDIAN SERVICES

BEACON RED offers unparalleled security through custom, defensive solutions powered by expert analysts, threat hunters, and forensic specialists. With advanced technologies, we provide cyber threat intelligence, incident response, advisory, and investigative services to safeguard national security. Our digital monitoring of underground forums and firsthand knowledge of threat actors protects against vulnerabilities in government systems.

At the core of our services is the Guardian Integrated Threat Intelligence Platform, designed by our multilingual intelligence team. The platform offers secure access to threat reports, specialist support, and advanced searches across billions of data points. It features modular tools for dark web monitoring, social media tracking, breach databases, attack surface analysis, and risk-based cyber intelligence. Our experts are on-call to support UAE sovereignty and security.

BEACON RED

OTHER SERVICES

CLIENT-CENTRIC SERVICES - PROJECT MANAGEMENT

Client-centric Services - Project Management prioritise clients' needs and goals, ensuring tailored solutions for each project. This approach involves active collaboration, transparent communication, and adaptive planning to align with clients' visions. By focusing on client satisfaction and personalised service, these services foster strong relationships and deliver projects that meet or exceed expectations. Key benefits include enhanced client trust, project efficiency, and successful outcomes that reflect clients' unique requirements and objectives.

HR TRANSFORMATION

Our HR Transformation team is passionate about shaping the future of work through culture, collaboration, and innovation. We empower organisations to embrace change as a growth opportunity, leveraging expertise in change management, digital transformation, and communication.

Our services cover everything from market analysis to talent acquisition, change management to total rewards compensation. But beyond the services, we're here to support organisations on their journey, providing guidance, empathy, and a human touch every step of the way.

SPEARHUNT

Spearhunt specialises in global talent acquisition, connecting businesses with niche technical talent across continents. Leveraging an extensive network, we ensure clients access a diverse pool of skilled professionals, tailored to meet their unique team requirements.

Our targeted recruitment framework focuses on matching candidates to specific client needs, from specialised technical roles to high-level leadership positions. Spearhunt's experts craft strategies to identify individuals with the exact skills, experience, and qualifications essential for success.

SERVICES

HORIZON

ENGLISH LANGUAGE PROFICIENCY

TRAINING

The fully accredited HORIZON English Language Proficiency (ELP) test enables pilots to fulfil their GCAA licence requirements.

FLYER

PILOT TRAINING

SINGLE ENGINE HELICOPTERS

PRIVATE PILOT LICENCE - HELICOPTER (PPL)

The PPL enables you to act as helicopter pilot-in-command for personal flight.

COMMERCIAL PILOT LICENCE - HELICOPTER (CPL)

We train pilots to operate single-engine helicopters on a commercial basis. This entry level course takes students from zero flying hours all the way to the GCAA CPL (H) licence, with no previous flying experience required.

FLIGHT INSTRUCTOR - HELICOPTER (FI)*

This advanced course provides pilots with the ability to instruct students to licence standard.

QUALIFIED MILITARY PILOT BRIDGE COURSE - HELICOPTER (QMP)

In this course, we train qualified military pilots to enable them to obtain the GCAA CPL (H) / CPL - IR (H) licence.

INSTRUMENT RATING (IR)

This programme trains pilots in Instrument Rating standards, which is required for any pilot to fly under Instrument Flight Rules (IFR).

TYPE RATING (TR)

This conversion course is designed to familiarise the pilot with the aerodynamics, mechanics, technology, operation, performance and emergency procedures of a certain aircraft type.

NIGHT RATING (NR)

Our Night Rating programme trains qualified and licensed pilots to safely operate a helicopter at night.

CATALOGUE

* Required Type Rating

HORIZON

PILOT TRAINING

TWIN-ENGINE HELICOPTERS

AIR TRANSPORT PILOT LICENSE ATPL (H)

The aim of our ATPL (H) integrated course is to train pilots to operate as a co-pilot on multi-pilot multi-engine helicopters in commercial air transport.

INSTRUMENT RATING (TWIN ENGINE)

The IR (H) modular flying training course trains pilots to operate helicopters under IFR and in Instrument Meteorological Conditions (IMC).

TWIN-ENGINE CONVERSION AND MULTI-CREW COORDINATION (MILITARY)

This course enhances the capability of pilots to perform operational missions and to function as a team, led by the pilot in command. It also provides pilots with the skills and knowledge to safely operate helicopters in a multi-pilot environment.

TYPE RATING (TR)

This conversion course is designed to familiarise the pilot with aircraft type.

NIGHT VISION GOGGLES (NVG)

This course trains pilots to operate a helicopter safely at night using Night Vision Goggles.

LAB SERVICES

ENGINEERING LAB

At LAHAB MILITARY SERVICES, our comprehensive technical support and engineering expertise covers process design, product design and development, plant design, safety analyses, and technology transfer, and a host of others technical services for the defence and security sector.

TRAINING LAB

Our UK-accredited training courses in Ammunition Management for activity and processes before, during and after manufacturing are among the region's most comprehensive. Run by fully qualified and highly experienced international experts, we can provide training in the UAE or at your own facilities worldwide.

Your staff need continuous training and development where it matters most. Which is why our in-depth courses enable you to understand, manage, maintain, store, transport and dispose of your ammunition safely and efficiently in accordance with ammunition best practice and the International Ammunition Technical Guidelines.

Our training courses include:

Ammunition and Explosives Foundation Course, Ammunition Technician, Ammunition and Explosives Storage Management, Ammunition and Explosives Transportation, EOD Certification, HAZMAT, Firing Officers Course, Explosive Facilities Licensing, Range and Proof Officers Course, Ammunition Surveillance, Ammunition Manufacturing and more. We also design tailor-made training to suit your specific operational requirements.

TESTING LAB

At LAHAB MILITARY SERVICES, our dedicated facilities for ammunition and components testing are among the best staffed and equipped in the MENA region.

Training Our UK-accredited training courses in Ammunition Management for activity and processes before, during and after manufacturing are among the region's most comprehensive. Run by fully qualified and highly experienced international experts, we can provide training in the UAE or at your own facilities worldwide.

- X-Ray Laboratory Our X-Ray laboratory undertakes full X-Ray inspection of a wide range of ammunition and components in order to ensure safety and quality. Our X-Ray technology is able to analyse large munitions such as aircraft munitions.
- Testing Range At LAHAB MILITARY SERVICES, our own purpose-built test range can perform a multitude of tests on raw materials, components, protective materials and complete products including most types of ammunition. Delivered by experts following international standards, we can also arrange custom-designed tests to fulfil any special requirements. Tests requiring larger operating areas can be performed using our mobile test range.

SIMULATION LAB

From safety traces analyses and blast overpressure analyses, to internal, external and terminal ballistic analysis, we have the talents and technologies to perform computational simulation, providing analyses for the most diverse range of situations and applications.

SERVICE LIFE SURVEILLANCE

At LAHAB MILITARY SERVICES, we have high-level capability in Service Life Surveillance – covering the entire ammunition lifecycle. From ammunition handling, storing and transporting to utilisation, we can help you not only to stay safe and secure, but to extend the serviceable life of your resources and maximise its value over time by testing, evaluating and recommending the optimal course of action. We can also support you in implementing your own SLS protocols so you can make the most informed decisions.

TESTING

As part of our SLS offering, we test and trial ammunition per lot, per location, with comprehensive suite of tests including:

- Visual examination
- X-Ray examination (where relevant)
- Chemical analysis to measure stability and status in the lifecycle
- Dynamic evaluation (where relevant) through static and functional trials.

INSIGHTS

Our SLS insights enable you to determine:

- Ammunition available for operation and deployment
- Ammunition safe for storage and transport
- Ammunition unsafe for storage
- Unserviceable ammunition
- Ammunition requiring refurbishment, demilitarisation or disposal
- Surplus stock planning
- Budgeting

CONSULTING

In addition, we offer SLS consulting services including:

- Ammunition and explosives incidents and enquiries
- Ammunition management documentation

DEMILITARISATION AND DISPOSAL

At the end of the ammunition lifecycle, we are the only local specialist to provide full demilitarisation and disposal services for military product, as well as the disposal of commercial materials including mining explosives and fireworks.

Disassembling products with care and neutralising volatile materials with environmentally-friendly processes to the highest standards, we ensure the safe and correct disposal and/or reworking of expired or unsafe ammunition and components.

XRANGE

TEST, VERIFY, PERFORM

THE REGION'S ONLY MULTI- DOMAIN TRAINING, TEST AND EVALUATION RANGE

XRANGE brings flexible, multi-domain Training, Test and Evaluation (TT&E) capabilities to the heart of the Middle East. Commercial and military customers can conduct complex, air, ground and maritime trials in a secure, instrumented and ultimately, safe environment. XRANGE allows our Global clients to test and verify the performance of their platforms, systems and munitions across their lifecycle - from concept design and acquisition to through to operational upgrades. XRANGE has the ability to cater for a wide range of platforms and systems, such as unmanned air, ground and maritime platforms, through to testing mission critical sensors and Electronic Warfare systems as well as conventional munitions. Our trials are delivered with support from our highly qualified teams of Test Engineers and Subject Matter Experts and underpinned by the gathering of critical trials data via modern surveillance assets, range telemetry, RF monitoring and data acquisition systems.

OUR SERVICES

- Trials Design and Execution
- Test And Safety Case Management
- Range Area Provision
- Trials Data Analysis and Instrumentation
- Test Range Management
- Turnkey Testing Support

A short 100km drive from Abu Dhabi city, XRANGE is located on a highly secure, access controlled island approximately 8km offshore. It is 35km by 15km, enabling a land danger area of 355km², inclusive of a 3.8-km-long, 60-metre-wide ICAO standard runway and a smaller 1.2KM long runway.

XRANGE provides airspace clearance up to 10,000ft which can be extended to 40,000ft when required and an additional 2,500km² of airspace can be activated via NOTAM. A 50km² sea danger area enables shallow water testing of maritime assets and systems.

Operationally accessible year-round and ideal for hot weather trials due to its arid, humid and dusty environment, the fully functional runway and ability to clear UAE customs on the island mean customers can fly directly into and out of XRANGE, simplifying logistics.

SKYEDGE ACADEMY

WORLD-CLASS TRAINING IN FPV DRONE OPERATIONS, UAVS AND OTHER AUTONOMOUS SYSTEMS

The ADASI SKYEDGE Academy equips UAE soldiers, Special Forces, and military graduates with unmatched skills in FPV drone operations. It provides them with a tactical edge in the field through hands-on training and cutting-edge AR/VR simulations. Participants learn to harness the power of FPV drones, as well as UAVs and other autonomous systems.

The curricula incorporate feedback from the UAE Armed Forces, ensuring UAE leadership in industry innovation and operational excellence. As well, a comprehensive tracking system monitors student performance, skill progression, and real-time status

Training location

- Al Ain REMAYA Curricula
- Turnkey solutions for UAV, FPV and autonomous systems training and development
- Active combat training to deliver tactical advantage for Special Forces
- Training and deployment of autonomous aerial systems
- Advanced facilities leverage AR/VR training sessions
- Incorporates feedback from UAE Armed Forces, ensuring UAE leadership, innovation and operational excellence in the UAV field
- Comprehensive tracking system monitors student performance, skill progression, and real-time status
